ARGEE BOY PAQUIBOT

Lapu-Lapu City, Cebu Province | 09333211652 | argeepaquibotprof@gmail.com | linkedin.com/in/argee-paquibot | github.com/Disargee18

PROFESSIONAL SUMMARY

Innovative Full-Stack Developer, hackathon champion, and student leader specializing in building secure web applications, real-time data architectures, and decentralized digital platforms. Proficient in React, Next.js, and Supabase with hands-on experience designing production-grade authentication, row-level security (RLS) policies, and high-concurrency state management. Recognized for technical excellence, rapid prototyping capabilities under tight deadlines, and effective team leadership.

TECHNICAL SKILLS

Frontend Development: React, Next.js, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Framer Motion, State Management

Backend & Database: Node.js, Express, Supabase, PostgreSQL, REST APIs, Row-Level Security (RLS)

Blockchain & Web3: CashScript, Smart Contracts, Bitcoin Cash, CashTokens Integration

DevOps & Networking: Git, GitHub, Linux Fundamentals, Cisco DevNet Environment, REST API Integrations

Leadership & Soft Skills: Project Leadership, Technical Pitching, Rapid Prototyping, Public Speaking

TECHNICAL PROJECTS

Seekr

12th UC ICT Congress Hackathon — 2nd Place Winner

- Built an intelligent code repository indexing and discovery platform that enables developers to search, analyze, and trace complex source code dependencies across multi-file codebases.
- Engineered fast client-side state filtering and optimized frontend rendering to display search results with instant visual feedback and syntax highlighting.
- Designed an intuitive UI/UX tailored for developer navigation, ensuring seamless inspection of repository file structures and function calls.

ReStart - Blockchain Rehabilitation Credentials

Paytaca Cashscript 3.0 Hackathon — 1st Place Champion

- Developed a decentralized credential verification platform that writes verified rehabilitation milestones permanently onto the Bitcoin Cash blockchain using CashScript smart contracts.
- Engineered tamper-proof, publicly accessible credential links that allow instant third-party verification directly against the blockchain without middleman dependencies or login barriers.
- Integrated CashTokens and CashScript contracts within a full-stack Next.js and Supabase application to ensure reliable transaction signing and immutable data storage.

Musika AI

Full-Stack AI Music Streaming Platform

- Architected a Spotify-inspired streaming application featuring an AI-assisted curation engine that automatically generates dynamic playlists based on user sentiment and mood inputs.
- Implemented Model Context Protocol (MCP) integrations to orchestrate context-aware chatbot interactions directly within the music player interface.
- Secured user profile data and playlist records using Supabase Authentication alongside granular Row-Level Security (RLS) database policies.

PSITS Voting System

Departmental Real-Time Election Web App

- Spearheaded the development of a departmental election platform leveraging React and Supabase for real-time ballot casting and vote tracking.
- Optimized client-side state management and database subscriptions to stream low-latency live election tallies and visual percentage updates.
- Ensured strict election integrity by enforcing unique voter authentication tokens and database-level constraints to eliminate duplicate voting.

AWARDS & ACCOMPLISHMENTS

1st Place Champion (ReStart)	Paytaca Cashscript 3.0 Hackathon	**02/2026**
Hackathon Champion	UCLM Hackathon Competition	**01/2026**
Best Pitcher (Hustler Award)	UCLM Hackathon Competition	**01/2026**
2nd Place Winner (Seekr)	12th UC ICT Congress Hackathon	**01/2026**
3rd Place Winner (Lightning Pitch)	PSITE ICT Congress	**01/2026**

EDUCATION

BS Information Technology **2023 - Present**

University of Cebu Lapu-Lapu and Mandaue | GWA: 1.3 | Dean's Lister | Student Leader / SBO | Senior High: Graduated with Honors
